Peel & Stick Guide

1 - ORDERING

Double Check

Please double check that you have what you need for your project + overage just in case. We print digitally, so colors will vary batch to batch, so please ensure you have the right amount before peeling/sticking/loving! Use our Footage Calculator to help determine the correct amount.

2 - PREP

Prep Your Wall

Using a damp cloth, clean the surface and allow to dry fully. This is also an opportunity to be honest with yourself: is this a smooth surface? Sorry love, orange peel, knockdown or a bumpy wall won't give you the best results! Not sure your wall is smooth? Shoot us a picture at hello@chasingpaper.com.

3 - MATERIALS

Gather Your Materials

You will need an x-acto knife + scissors -- a tape measure and level are helpful too!

4 - PLACEMENT

Start With A Corner Or Straight Line

It's helpful to have a guide so either start in a corner or create a plumb line. If you are thinking about a geometric or striped wallpaper pattern a plumb line is key!

5 - INSTALL

Get Sticking

Peel the paper from the backing about 6"-8" at a time - smoothing with your hand as you go. We suggest smoothing from the center of the panel out to the edges.

6 - TRIM

Trim Time

Use an x-acto knife to trim off any excess paper.
